

VS Code + Claude Code: screen guide (SBP Wall project)

Akash · IC Singapore · 24 Sep 2026

1 Activity bar

Switches the left panel: Explorer, Search, Git, Run, Extensions. The * icon opens Claude Code.

2 Explorer

Your COMPANY SET UP folder, like Windows File Explorer. Click a file to open it.

2a lib/sbp_geom.py

The geometry maths: offset from your line, corner cleanup, pile spacing.

2b SBP Count button

bundle.yaml = button name and tooltip; script.py = counts HARD/SOFT per wall.

2c SBP Wall button

The main tool you click in Revit (script.py = the code).

2d CLAUDE.md / HISTORY.md

Project notes and chat history. Claude reads them first, so it remembers the project.

3 Editor

Where code is read and edited. Line numbers on the left, file mini-map on the right.

3a Breadcrumb

Shows where the open file sits: pyRevit > SBP.extension > ... > script.py

4 Claude Code chat

Talk to Claude here, same as the Cowork chat, but it works on these files directly.

4a Your message

What you typed plus attached screenshots (image.png).

4b File edit (diff)

Claude changed HISTORY.md. RED = removed lines, GREEN = added lines.

4c Test result: PASSED

H014 and S012 have correct Top -150 and Bottom -10000 / -9000. Level logic works.

4d YOUR ACTION: 4 open points

1 Line invisible? 2 Gap = 150? 3 SBP Count = 22 / 21 / 43? 4 Spacing A (≈886) or B (exact 900)?

4e Input box

Type here. "script.py" = file in focus · "Opus 5.5 Extra high" = model · "Auto" = edits without asking.

5 Status bar

0 0 = no errors or warnings in the code.
